EDUCATION

Texas A&M University <i>B.S. Computer Science</i> - GPA: 3.65/4.00 - Relevant Coursework: CSCE 120 (Program Design & Concepts), ENGR 102 (Engineering Lab), MATH 151 (Calculus I)	College Station, TX Aug 2025 — May 2029
---	--

LEADERSHIP & EXPERIENCE

Figma Campus Leader Figma - Represent Figma as official campus ambassador, driving product adoption across a community of 300+ students through hands-on demos and peer outreach. - Plan and lead 4+ workshops on Figma's design and prototyping tools, drawing 50+ students per session. - Serve as voice-of-customer liaison between Figma and the student body, gathering and prioritizing feedback that surfaced 3 recurring campus needs and shaped the following semester's workshop curriculum.	Aug 2026 — May 2027 College Station, TX
--	--

Technology & Programs Intern Frisco Public Library - Owned youth and technology programs end to end — set goals, built schedules, coordinated staff and materials, and ran events drawing 300+ attendees. - Partnered with librarians and department leads across 3 branches to prioritize programming based on community demand and resources, resulting in two new recurring youth programs adopted library-wide. - Owned technical operations for 20+ public-facing devices and digital resources, ensuring reliable access during high-attendance events (300+ attendees). - Documented 8 recurring workflows and onboarded new seasonal staff and volunteers, cutting repeat questions and handoff friction between shifts by roughly 30%.	May 2026 — Jul 2026 Frisco, TX
---	-----------------------------------

Secretary, Executive Board TAMU ColorStack - Manage internal operations for an 80+ member chapter — meeting cadence, agendas, decision records, and the systems the board runs on — keeping all 7 officers aligned each semester. - Co-plan 20+ chapter events per semester — including workshops, socials, sports events, and coding support sessions — coordinating logistics, timelines, and member communication. - Redesigned the board's task-tracking and information-sharing workflows using Notion — centralizing dates, notes, and decisions — eliminating duplicated effort across all 7 officer roles and saving an estimated 5 hours per week.	Apr 2026 — Present College Station, TX
---	---

Technology & Operations Intern Frisco Public Library - Maintained daily operations for 15+ public-facing devices and internal systems, ensuring consistent digital resource availability across 3 library branches. - Resolved technical troubleshooting requests for 100+ patrons daily at the front desk, covering device setup, account access, and printing issues. - Cataloged and sorted 3,000+ circulation items via barcode-driven workflows, maintaining accurate inventory across the branch's shelving sections.	Jun 2024 — Sep 2024 Frisco, TX
---	-----------------------------------

PROJECTS

Sole Developer — Python, discord.py, SQLite, Notion API, Docker, Fly.io, Stack — Discord Bot for TAMU ColorStack - Built a production Discord bot for 100+ club members handling onboarding, attendance, points, and role management. - Architected a two-layer data system syncing a local SQLite store to Notion, giving officers a live, human-readable view of activity. - Implemented identity verification linking Discord accounts to member records, with a persistent modal UI and fallback matching logic to handle data inconsistencies gracefully. - Resolved a sync race condition using concurrency locks and implemented role-based permissions to cleanly separate member, officer, and admin command surfaces. - Containerized the bot with Docker and deployed to Fly.io for 24/7 uptime, shipping 5+ feature iterations and tweaks based on direct feedback from club leadership.

Sole Developer — JavaScript / React , VitalCast AI - Built a client-side health forecasting app that turns 800MB+ Apple Health exports into 10-year cardiovascular risk, sleep quality, and HRV-based stress scores using validated clinical models (Framingham, PSQI). - Moved the XML parsing engine into Web Workers so large exports process without blocking the main thread or freezing the UI. - Designed the entire data pipeline to run client-side — eliminating server uploads and storage of sensitive health data to preserve user privacy by default. - Translated a designer's specs into a fully shipped interface, independently owning all engineering across parsing, clinical modeling, and frontend implementation.

SKILLS

Program & Product: event and program planning, stakeholder coordination, user feedback synthesis, scheduling, process documentation, cross-functional communication Programming: Python, TypeScript, JavaScript, Java Frameworks & Technologies: React, Next.js, FastAPI, REST APIs, Web Workers Developer Tools: Git, GitHub, VS Code, IntelliJ, Figma, Notion Spoken Languages: English (native), Spanish (intermediate)
